TESTIMONIALS

TURF PRODUCTS / GOLF COURSES

Kathy Beck, City of Tampa Park Superintendent, Orlando, Florida

"We have used the Super fish, seaweed, humic acid, and soil conditioner for about two years in high profile maintenance areas. The results are healthy, vigorous plants that require less pesticides, reduced the stress and overall maintenance.

In urban soils the Super Soil Conditioner (SSP) alters the soil and provides aeration allowing better intake of nutrients and water.

Flowering plants produce bigger, brighter flowers, and blooms all year long."

Cliff Brown, Hillsborough County Park Manager, Florida

"We have used AgriInfoTech products for approximately three years at Eureka Spring.

The Super Seaweed, 10-8-8 and 3-18-18 made an immediate difference with our plants and continue to provide excellent nutrients for a well balanced maintenance program."

**Robert A Kyle, Owner, Robert A Kyle Tree and Landscaping, 4610 Bray Rd
Tampa, FL (813) 885-5517**

"The Super seaweed and 5~5-15 have shown exemplary results when used for Transplanting and established material, these products can be used to keep a constant nutritional supply without burning or harming new roots. The nutritional uptake by the plant is almost immediate. We have seen new root growth and leaf change within about two weeks.

It is easy to apply and mixes well with other chemicals. It is cost effective and labor saving. I highly recommend the use of these products."

**Winford L. Fowler, President, Landscape & Horticulture Services, Inc. 8466 N
FL 34223**

"Over the past four years, Landscape and Horticulture Services has been using several naturally organic fertilizers and soil enhancing products purchased from Tampa Agricultural Products. We are very pleased with the results of plant growth and turf production. Here is a list of a few products we use regularly in our lawn and ornamental growth management program;

Seaweed is used on a timely basis, mainly during times of plant stress. It is very compatible with other products and enables the plants and turf to be fertilized when temperatures are very high and most other liquid applications will burn.

Humic Acid is used mostly in the spring and fall. It helps the ground breaking up all the tied up pesticides and other microorganisms so the roots may travel easier in the soil. It also fertilizes the root system for growth.

Formula Iron (Dark Green) is used during hot summer months when color is needed more than growth. This naturally organic iron can be foliar sprayed during hot weather without burning of plants. This is a very high quality iron product."

**Jason DePaepe, Athletic Turf grass Manager, Department of Intercollegiate
Athletics, University of Colorado, Boulder**

To most turf managers, 60 minutes doesn't mean that much other than an hour out of their day. As Athletic Turf grass Manager for the University of Colorado's Golden Buffaloes, 60 minutes can seem like an eternity, especially in front of a nationally televised audience on Saturday afternoon.

Since our conversion to a natural turf field, we have felt very strongly about continuing to build a better soil and to develop sustainability rather than just feeding turf. In 2002, we were fortunate to be introduced to Cycle Works LLC. Of Colorado. Their belief, "It all starts with the soil" mirrored our approach, so we knew they were a perfect fit to match our needs. Cycle Works designed a customized biological program and provided us with the best pharmaceutical grade solutions on the market. Their true professionalism and expertise only adds to their ever-growing credibility.

Today we don't have to worry if Folsom Field or our practice fields will hold up to the best of Big XII football. Their scientifically proven bio-solutions were a perfect fit for promoting over all turf grass health and a more resilient playing surface week after week.

In 2002, the Sports Turf Managers Association named Folsom Field College Football Field of the Year. We know all of our hard work had a lot to do with getting that prestigious award, but we also had a little help.

**Daryl R. Wright, Village Lawn Care, Inc. Spray Technician, NC 916 EAST
136TH AVENUE, TAMPA, FL 33613**

I've been in Tampa for only a short period of time, but in my 25 years of experience with chemicals, I have never been so impressed with a product as I have with Super Seaweed.

We at Village Lawn Care have had problems with palms and citrus trees. After only 4 months we have solved almost everything from sour soil to minor deficiencies with foliar applications and soil drenching.

Thank you 80 much for introducing us to this product."

**Vimala Jayaraj, New England Tamil Church, 4 Oak Street, Wakefield, MA
01880**

I've been in Boston for about seven years; I have tried many chemicals available in the market to recover my ill potted plants in my Churchyard. I have never been so impressed with AgriInfoTech product as I have with plant growth booster

It is a miracle "plant growth booster recovered even almost dried plants too". It is cost effective and labor saving. I highly recommend the use of these products."
